2.a Combined Metric for Publications (PU) - 30 Marks

It is proposed that Publications indexed in Scopus, Web of Science, and Google Scholar only will be counted for assessment. An average value **P** for the previous three (3) years will be computed as detailed later in this item.

The Institution will submit faculty publication list as supporting information. However, the primary sources of information will be Scopus, Web of Science and Google Scholar.

Books/Monographs should have ISBN number and be published by reputed publishers.

Assessment Metric for Publications (Category B):

PU = 20× Percentile (expressed as a fraction) parameter on the basis of (P/F)

Here.

P is the number of publications = Weighted average of numbers given by Scopus, Web of Science and Google Scholar over the previous 3 years.

P = (0.3PW + 0.6PS + 0.1PG)

Here,

PW: Number of publications reported in Web of

Science. **PS:** Number of publications reported in Scopus

PG: Number of publications reported in Google Scholar.

 ${f F}$ is the number of regular faculty members as used in Item 1.

Explanation:

Percentile parameter = Percentile value of (P/F)/100

Although the formulas are identical for both categories of institutions, the percentile parameter will be computed separately for each category.
